2nd CIVILIZATION (BELGIUM)

After the huge appreciation received in the year 2012 by the album "From The Dark Report", the rentrée of the Belgian trio 2nd Civilization really possesses the characteristics of an epic event.

Their style, an intriguing combination of avant-garde electropop, darkwave and EBM elements, once again surpassed all expectations offering a long sequence of top-notch technological artifices that will amaze you with their vibrant energy, highlighting the extraordinariness of the composition ability that distinguishes this band.

The twelve songs included in the tracklist of the new full-length "Let's Play" are scientifically processed by variable drum-programming speeds, while a vast databank of electronic sounds creates danceable propulsions wonderfully integrated with the spatiality of Koen D's voice and with the capturing textures of synths played by Patrick D and Koen (Vidi).

Melodiously futuristic, evocatively dark and frantic atmospheres are perceptible in this new, sensational performance destined to become a success on a planetary scale, deserving to it the same honor and glory of a masterpiece. The Second human Civilization has been further extended its domain!
